

You know how to find derivatives of polynomial functions. This packet will show you how to find the derivatives of exponential functions, then products and quotients of polynomials.

First, we need a few shortcuts for differentiation.

**The Derivative of  $a^x$** 

$$\frac{d}{dx}(a^x) = (\ln a)a^x$$

**The Derivative of  $e^x$** 

$$\frac{d}{dx}(e^x) = e^x$$

## The Product Rule

**The Product Rule**

$$(fg)' = f'g + fg'$$

The derivative of a product is the derivative of the first factor multiplied by the second, plus the first factor multiplied by the derivative of the second.

**Example 1.** Differentiate  $f(x) = x^2(x^3 + 5)$

$$\begin{aligned} \text{Solution: } f'(x) &= \frac{d}{dx}\left(x^2(x^3 + 5)\right) = \left[\frac{d}{dx}x^2 \cdot (x^3 + 5)\right] + \left[x^2 \cdot \frac{d}{dx}(x^3 + 5)\right] \\ &= 2x \cdot (x^3 + 5) + x^2 \cdot (3x^2) \\ &= 2x^4 + 10x + 3x^4 \\ &= 5x^4 + 10x \end{aligned}$$

*Check:* multiply it out and then differentiate  $f(x) = x^2(x^3 + 5) = x^5 + 5x^2$

$$f'(x) = \frac{d}{dx}(x^5 + 5x^2) = 5x^4 + 10x$$

**Example 2.** Differentiate  $y = x \cdot 2^x$

$$\begin{aligned} \text{Solution: } y' &= \frac{d}{dx}(x \cdot 2^x) = \frac{d}{dx}x \cdot 2^x + x \cdot \frac{d}{dx}2^x \\ &= 1 \cdot 2^x + x \cdot \ln 2(2^x) \\ &= 2^x + (.69315)x2^x \\ &= (1 + .69315x)2^x \quad <\text{Factor out } 2^x \text{ from each term}> \end{aligned}$$

**Example 3.** Differentiate  $y = (t^2 + 3)e^t$

$$\begin{aligned} \text{Solution: } y' &= \frac{d}{dt}(t^2 + 3)e^t = \frac{d}{dt}(t^2 + 3) \cdot e^t + (t^2 + 3) \frac{d}{dt}(e^t) \\ &= (2t)e^t + (t^2 + 3)e^t \quad <\text{Factor out } e^t \text{ from each term}> \\ &= (2t + t^2 + 3)e^t \\ &= (t^2 + 2t + 3)e^t \end{aligned}$$

## The Quotient Rule

### The Quotient Rule

$$\left( \frac{f}{g} \right)' = \frac{f'g - fg'}{g^2}$$

The derivative of a quotient is the derivative of the numerator times the denominator minus the numerator times the derivative of the denominator all over the denominator squared.

**Example 4.** Differentiate  $f(x) = \frac{1+x}{2+3x+4x^2}$

$$\begin{aligned} \text{Solution: } f'(x) &= \frac{d}{dx} \left( \frac{1+x}{2+3x+4x^2} \right) = \frac{\left( \frac{d}{dx}(1+x) \right) \cdot (2+3x+4x^2) - (1+x) \cdot \left( \frac{d}{dx}(2+3x+4x^2) \right)}{(2+3x+4x^2)^2} \\ &= \frac{1 \cdot (2+3x+4x^2) - (1+x)(3+8x)}{(2+3x+4x^2)^2} \\ &= \frac{(2+3x+4x^2) - (3+11x+8x^2)}{(2+3x+4x^2)^2} \\ &= \frac{-4x^2 - 8x - 1}{(2+3x+4x^2)^2} \end{aligned}$$

**Example 5.** Differentiate  $y = \frac{3x+1}{5x+2}$

$$\begin{aligned} \text{Solution: } y' &= \frac{d}{dx} \left( \frac{3x+1}{5x+2} \right) = \frac{\left( \frac{d}{dx}(3x+1) \right) \cdot (5x+2) - (3x+1) \left( \frac{d}{dx}(5x+2) \right)}{(5x+2)^2} \\ &= \frac{3(5x+2) - (3x+1) \cdot 5}{(5x+2)^2} \\ &= \frac{(15x+6) - (15x+5)}{(5x+2)^2} \\ &= \frac{15x+6 - 15x-5}{(5x+2)^2} \\ &= \frac{1}{(5x+2)^2} \end{aligned}$$

**Example 6.** Differentiate  $f(x) = \frac{1}{1+e^x}$

$$\begin{aligned} \text{Solution: } f'(x) &= \frac{d}{dx} \left( \frac{1}{1+e^x} \right) = \frac{\left( \frac{d}{dx}(1) \right) \cdot (1+e^x) - (1) \left( \frac{d}{dx}(1+e^x) \right)}{(1+e^x)^2} \\ &= \frac{0(1+e^x) - 1(0+e^x)}{(1+e^x)^2} \\ &= \frac{-e^x}{(1+e^x)^2} \end{aligned}$$

Section 1. For Problems 1-10, find the derivative **using the product rule**. (5 points each)

1.  $f(x) = (3x + 8)(2x - 5)$

1. \_\_\_\_\_

2.  $f(x) = xe^x$

2. \_\_\_\_\_

3.  $y = (x^2 + 7) \cdot 2^x$

3. \_\_\_\_\_

4.  $y = (t^3 - 7t^2 + 1)e^t$

4. \_\_\_\_\_

5.  $y = (x^2 - 1)(x^2 + 7x - 8)$

5. \_\_\_\_\_

6.  $w = (t^3 + 5t)(t^2 - 7t + 2)$

6. \_\_\_\_\_

7.  $f(t) = 2^t(1-t)$

7. \_\_\_\_\_

8.  $y = e^x(3 - x^2)$

8. \_\_\_\_\_

9.  $f(x) = (3x^2 + 5x)e^x$

9. \_\_\_\_\_

10.  $f(x) = \frac{e^x}{x^2}$  (Hint: rewrite with a negative exponent)

10. \_\_\_\_\_

Section 2. For Problems 11-18, find the derivative **using the quotient rule**. (5 points each)

11.  $f(x) = \frac{5x^2}{x^3 + 1}$

11. \_\_\_\_\_

12.  $y = \frac{x}{e^x}$

12. \_\_\_\_\_

13.  $z = \frac{t^2 + 5t + 2}{t + 3}$

13. \_\_\_\_\_

14.  $f(x) = \frac{x^2 + 3}{x}$

14. \_\_\_\_\_

15.  $f(z) = \frac{3z^2}{5z^2 + 7z}$

15. \_\_\_\_\_

16.  $f(x) = \frac{1+x}{x+3}$

16. \_\_\_\_\_

17.  $y = \frac{5x}{x^2 + 7}$

17. \_\_\_\_\_

18.  $f(x) = \frac{e^x}{x^2}$

18. \_\_\_\_\_

Section 3. If  $f(x) = 2^x \cdot 3^x$ , find  $f'(x)$  and  $f''(x)$  (5 points each)

19.  $f'(x) =$

19. \_\_\_\_\_

20.  $f''(x) =$

20. \_\_\_\_\_
